Where is syntax?

- Hierarchical syntactic labels
- Where did the labels come from?
- Are all VPs the same? ...

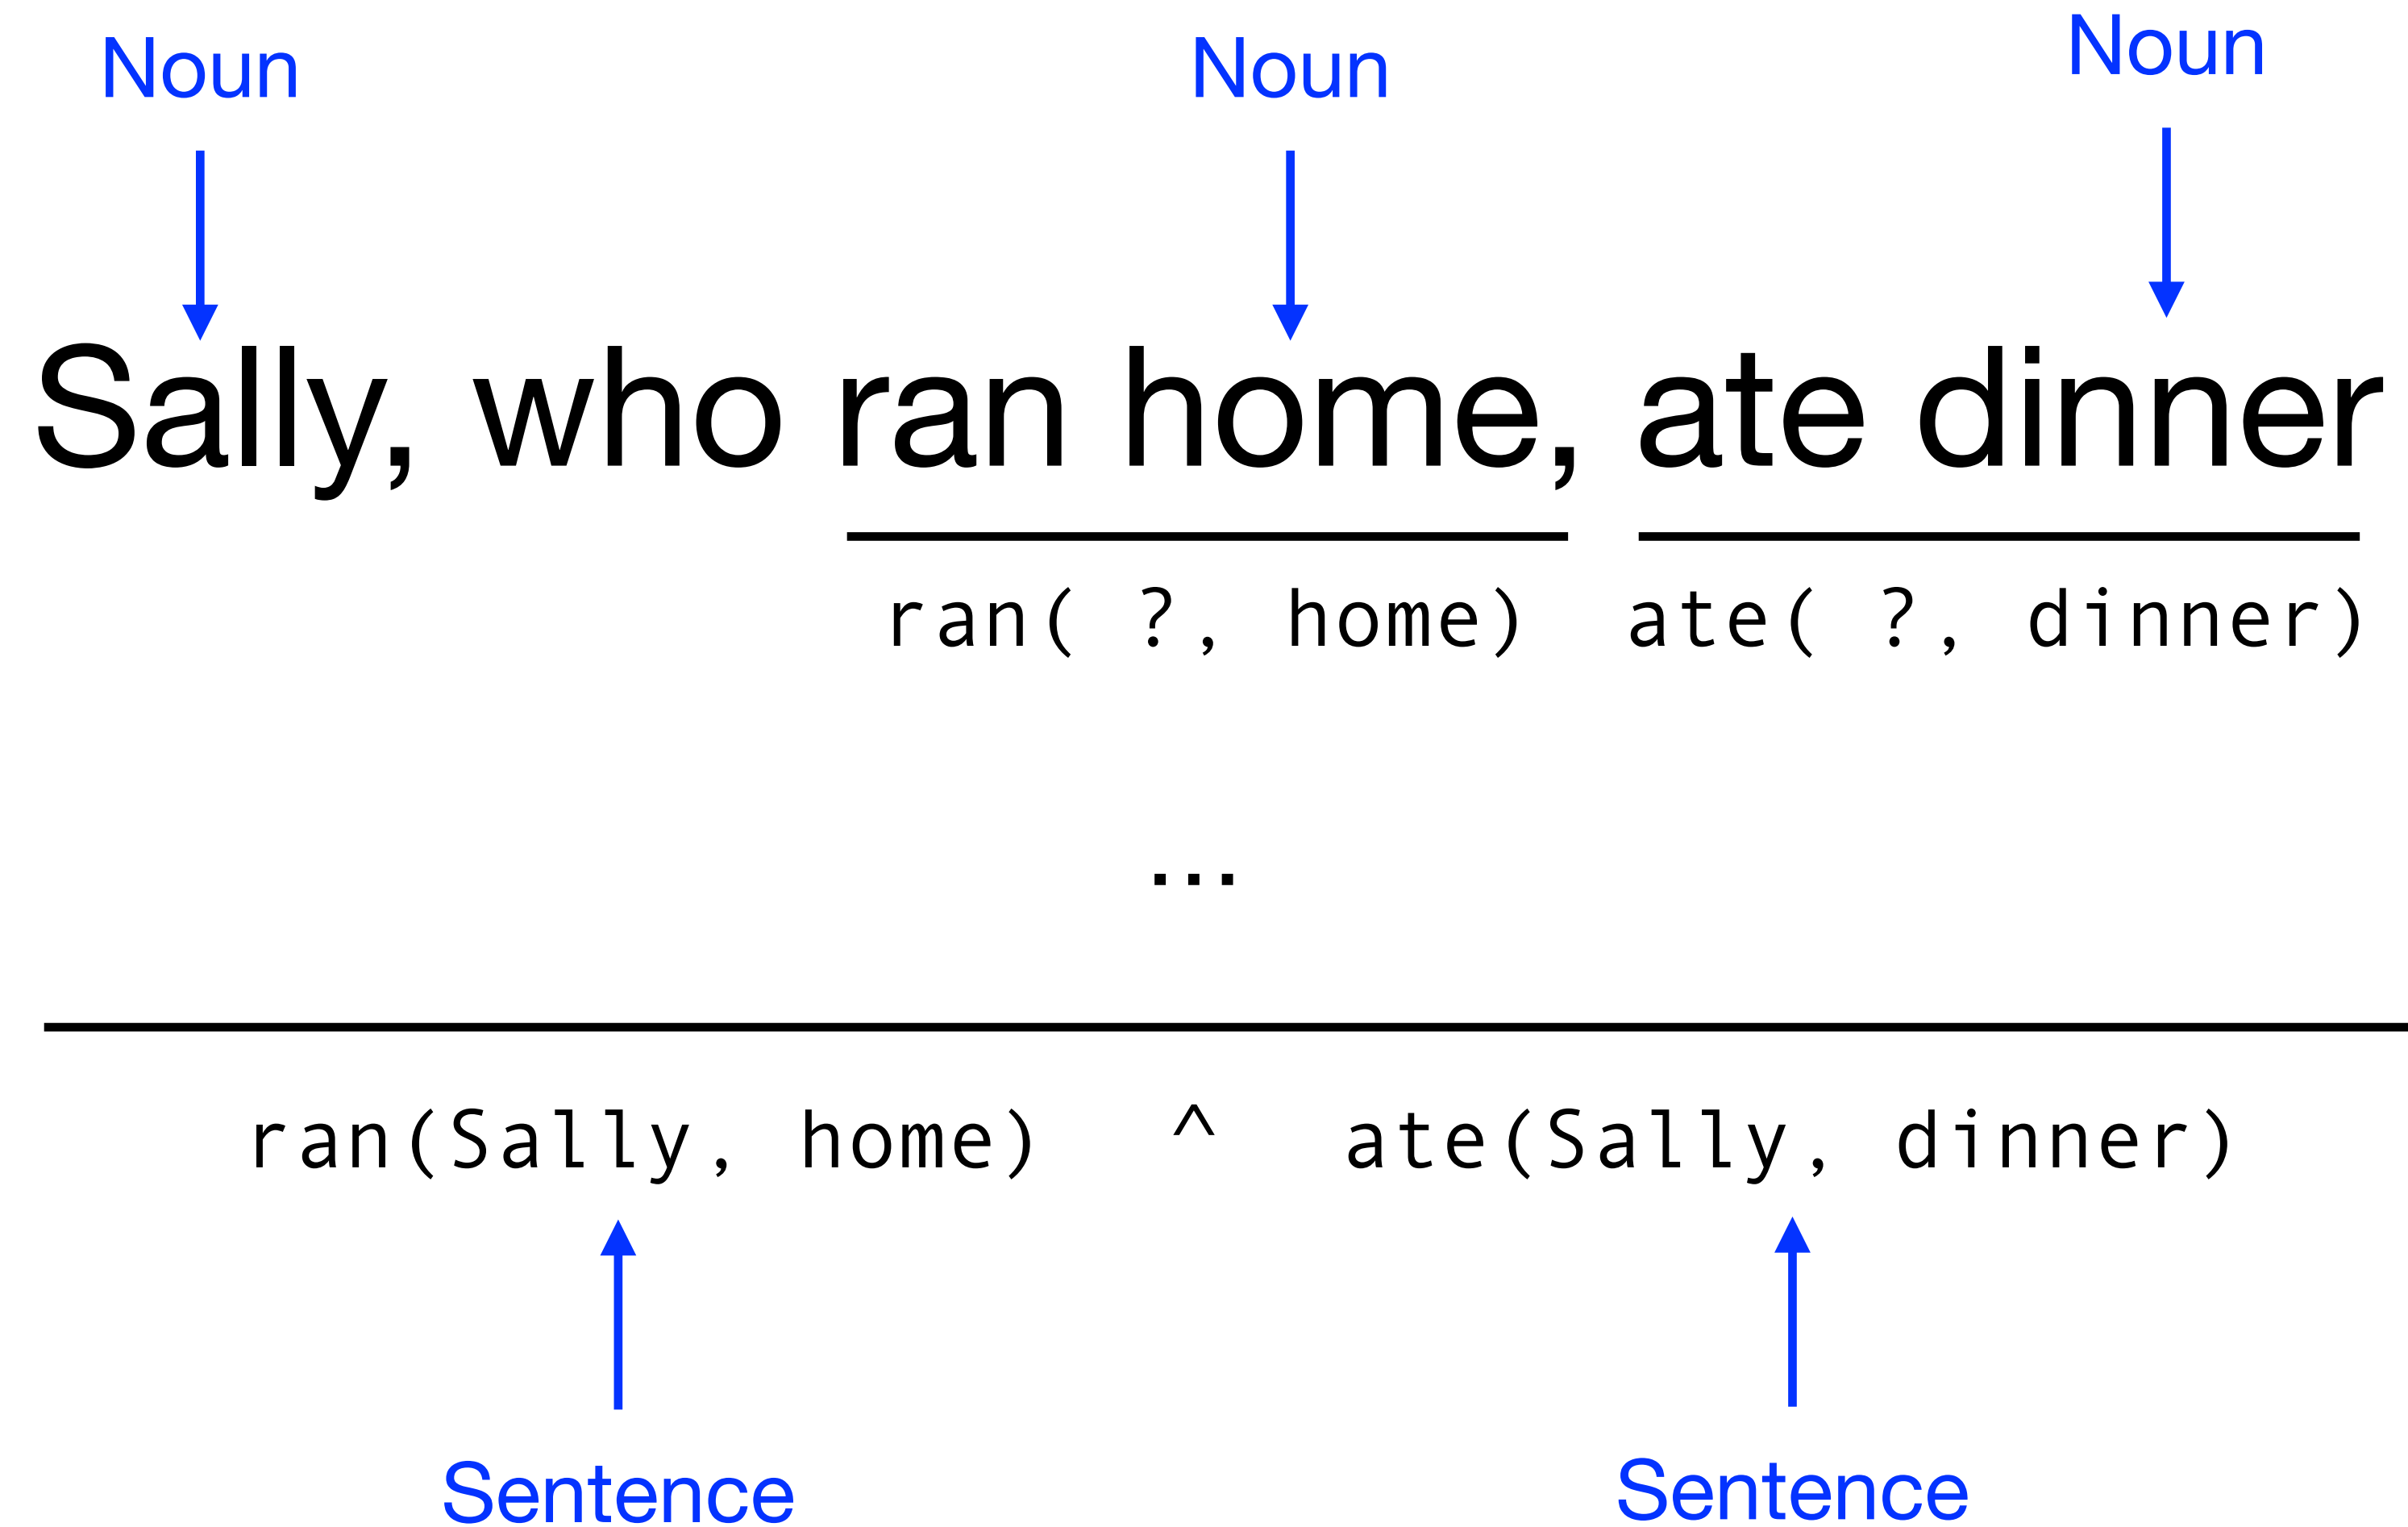

- Semantic labels
- How do you represent long-distance effect?
- Are all languages really tree-structured?

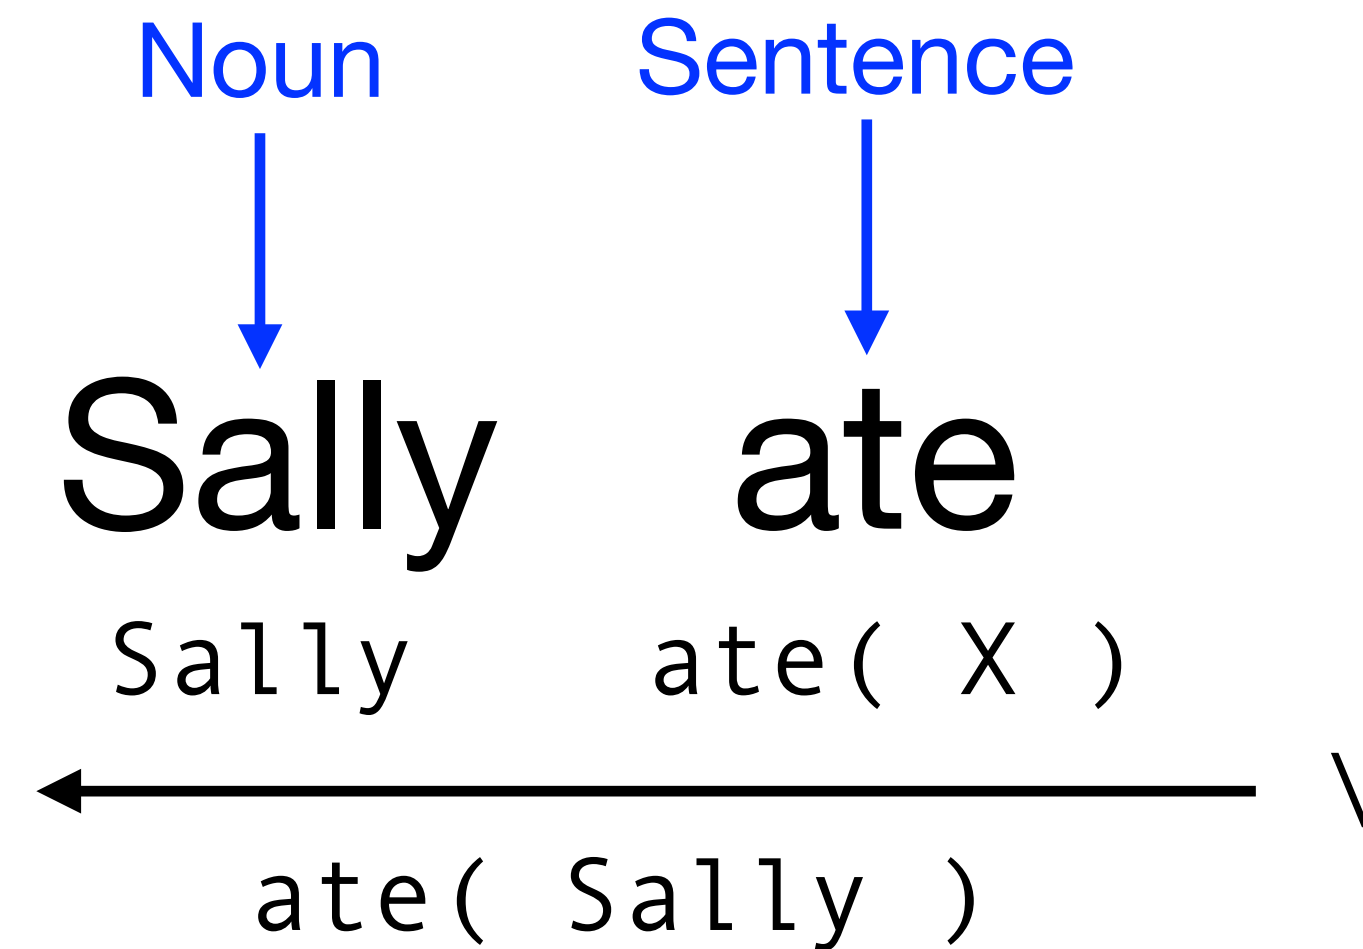

Where is syntax?

Where is syntax?

Syntax as Functions

Function Application

$S \setminus N$ is a function that if applied to a N on the left returns an S

Grammar:

Sally: N

ate: $S \setminus N$

Every word is a function or an argument

Syntax as Functions

Sally ate dinner
N ? N
 $\xleftarrow{\quad}$
 $S \setminus N$
 $\xleftarrow{\quad}$
 S

Functions returning functions

$(S \setminus N) / N$ N
 $\xleftarrow{\quad}$
 $S \setminus N$

Grammar:

Sally: N

dinner: N

ate: $S \setminus N$, $(S \setminus N) / N$

Syntax as Functions

?: Takes in N (on right) and returns N
 N / N

Grammar:

Sally: N

dinner: N

ate: $S \setminus N$, $(S \setminus N) / N$

the: N / N

Syntax as Semantics

ate(x,y) the(x)

Sally ate the dinner

N $(S \setminus N) / N$ N / N N

The diagram illustrates the relationship between three sets: S , $S \setminus N$, and N . A long horizontal line with arrows at both ends is labeled S below it. Above this line, a shorter horizontal line with an arrow at its right end is labeled $S \setminus N$ below it. Above the $S \setminus N$ line, a third horizontal line with an arrow at its right end is labeled N below it. The arrows indicate that N is a subset of $S \setminus N$, which is a subset of S .

the(dinner)

ate(X, the(dinner))

ate(Sally, the(dinner))

Recap

Grammar

Sally	N
dinner	N
the	N/N
ate	S\N, (S\N)/N
quickly	S/S

Function Math

Application

$$\begin{array}{lcl} X/Y & Y & \longrightarrow X \\ Y & X\backslash Y & \longrightarrow X \end{array}$$

Composition

$$\begin{array}{lcl} X/Y & Y/Z & \longrightarrow X/Z \\ X/Y & Y\backslash Z & \longrightarrow X\backslash Z \\ Y/Z & X\backslash Y & \longrightarrow X/Z \\ Y\backslash Z & X\backslash Y & \longrightarrow X\backslash Z \end{array}$$

Puzzle Time

What is a relative clause?

A noun modifier

Unification & Dependencies

`ran(Sally, home)`

Note: These are more fine-grained labels than `nsubj/dobj`

Coordination

Dependency Grammar

CCG Dependency Grammar

Coordination

Dependency Grammar

CCG Dependency Grammar

Coordination

$$X \quad \text{conj} \quad \longrightarrow X[\text{conj}]$$

$$\text{conj} \quad X[\text{conj}] \longrightarrow X$$

apple and orange

N

conj

N

$N[\text{conj}]$

N

heard and saw

$S \setminus N$

conj

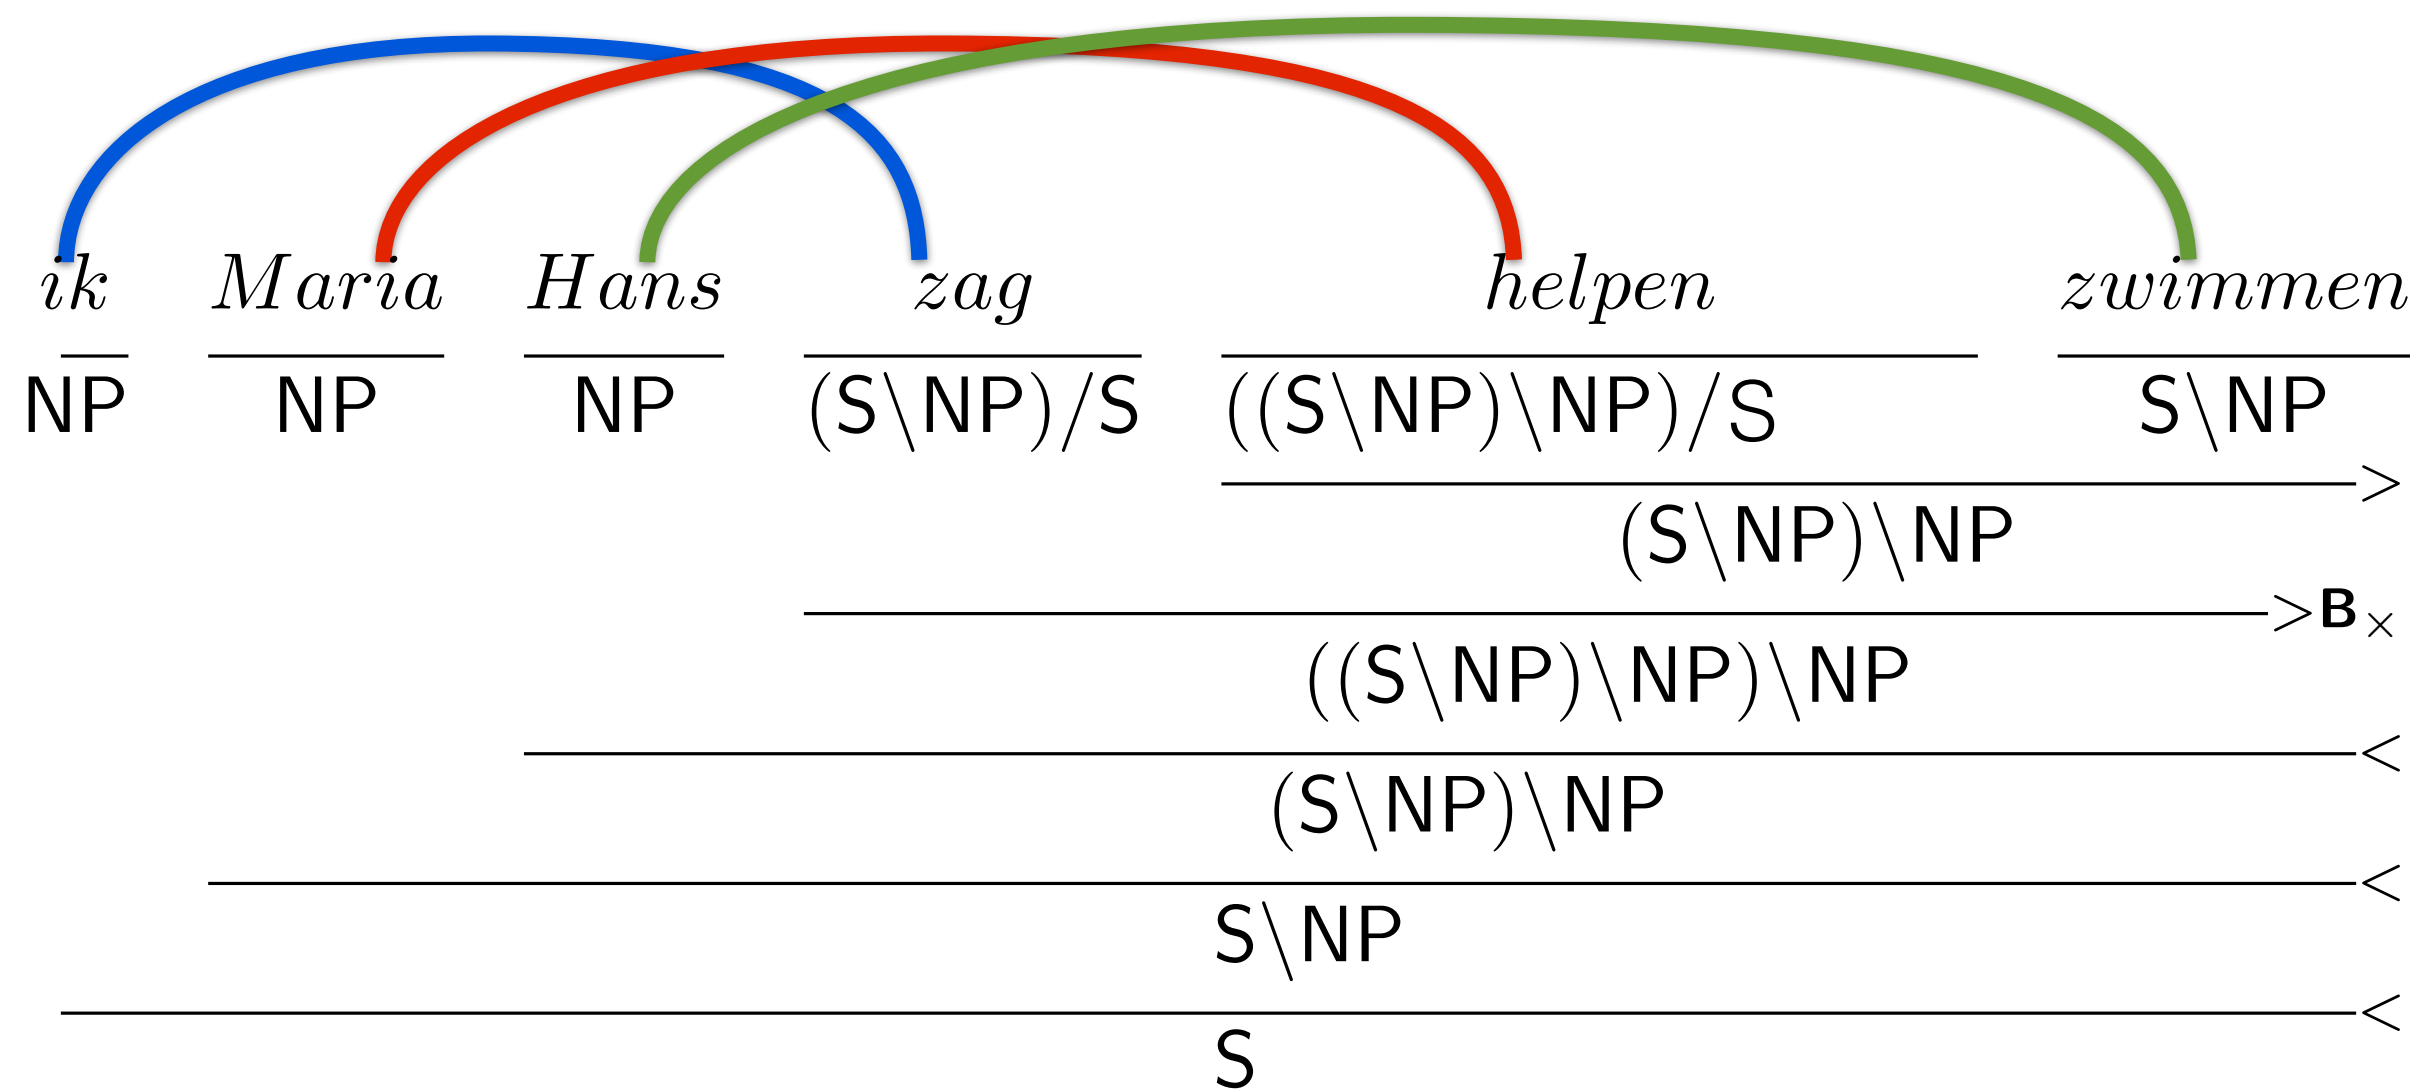

$S \setminus N$

$S \setminus N[\text{conj}]$

$S \setminus N$

Side note: Crossing Dependencies Are Real

I ate the red and yellow, apple and banana, respectively

Puzzle Time

Sally heard and John saw the explosion
N (S \ N) / N conj N (S \ N) / N N

What should apply to what?

Puzzle Time

Fill Arg 1 before Arg 2

Sally heard

$$\frac{N \quad (S \setminus N) / N}{S / N} \rightarrow$$

Sally heard

$$\frac{\overline{N \quad (S \setminus N) / N}}{S / (S \setminus N)} \rightarrow S / N$$

Type-Raising

Lexicon & Rules

Grammar

Sally	N
dinner	N
the	N/N
ate	S\N, (S\N)/N
quickly	S/S
and	conj

Application

$$\begin{array}{lcl} X/Y & Y & \longrightarrow X \\ Y & X\backslash Y & \longrightarrow X \end{array}$$

Composition

$$\begin{array}{lcl} X/Y & Y/Z & \longrightarrow X/Z \\ X/Y & Y\backslash Z & \longrightarrow X\backslash Z \\ Y/Z & X\backslash Y & \longrightarrow X/Z \\ Y\backslash Z & X\backslash Y & \longrightarrow X\backslash Z \end{array}$$

Conjunction

$$\begin{array}{lcl} X & conj & \longrightarrow X[conj] \\ X[conj] & X & \longrightarrow X \end{array}$$

Type-Raising

$$\begin{array}{lcl} N & \longrightarrow & S / (S \backslash N) \\ N & \longrightarrow & S \backslash (S / N) \end{array}$$

That's it!
Just make up categories

Puzzle Time

Puzzle Time

Sweeping things under the rug

- It's really just S, N, and conj? Well... no

NP, PP

- Ok, so 5 categories? Sorta...

S[adj], S[dcl], S[b],... NP[nb], ...

- OK, but we did learn all the rules right?

Ugh,... “Yes” — ignore Type-Changing, it's not really real...

- Are you lying to make this formalism sound prettier than it really is?

The dirty ...

As I said, everything is perfect, there are no questions, everyone is happy with this result.
CCG is beautiful and perfect.

Why CCG?

Could be SQL, SPARQL, python, etc

Sally, who ran home, ate dinner

$\lambda y . \lambda x . f(x, y)$

ran $(S \setminus N) / N$

ate $(S \setminus N) / N$

who $(N \setminus N) / (S \setminus N)$

$\lambda y . \lambda x . \text{run}(x, y)$

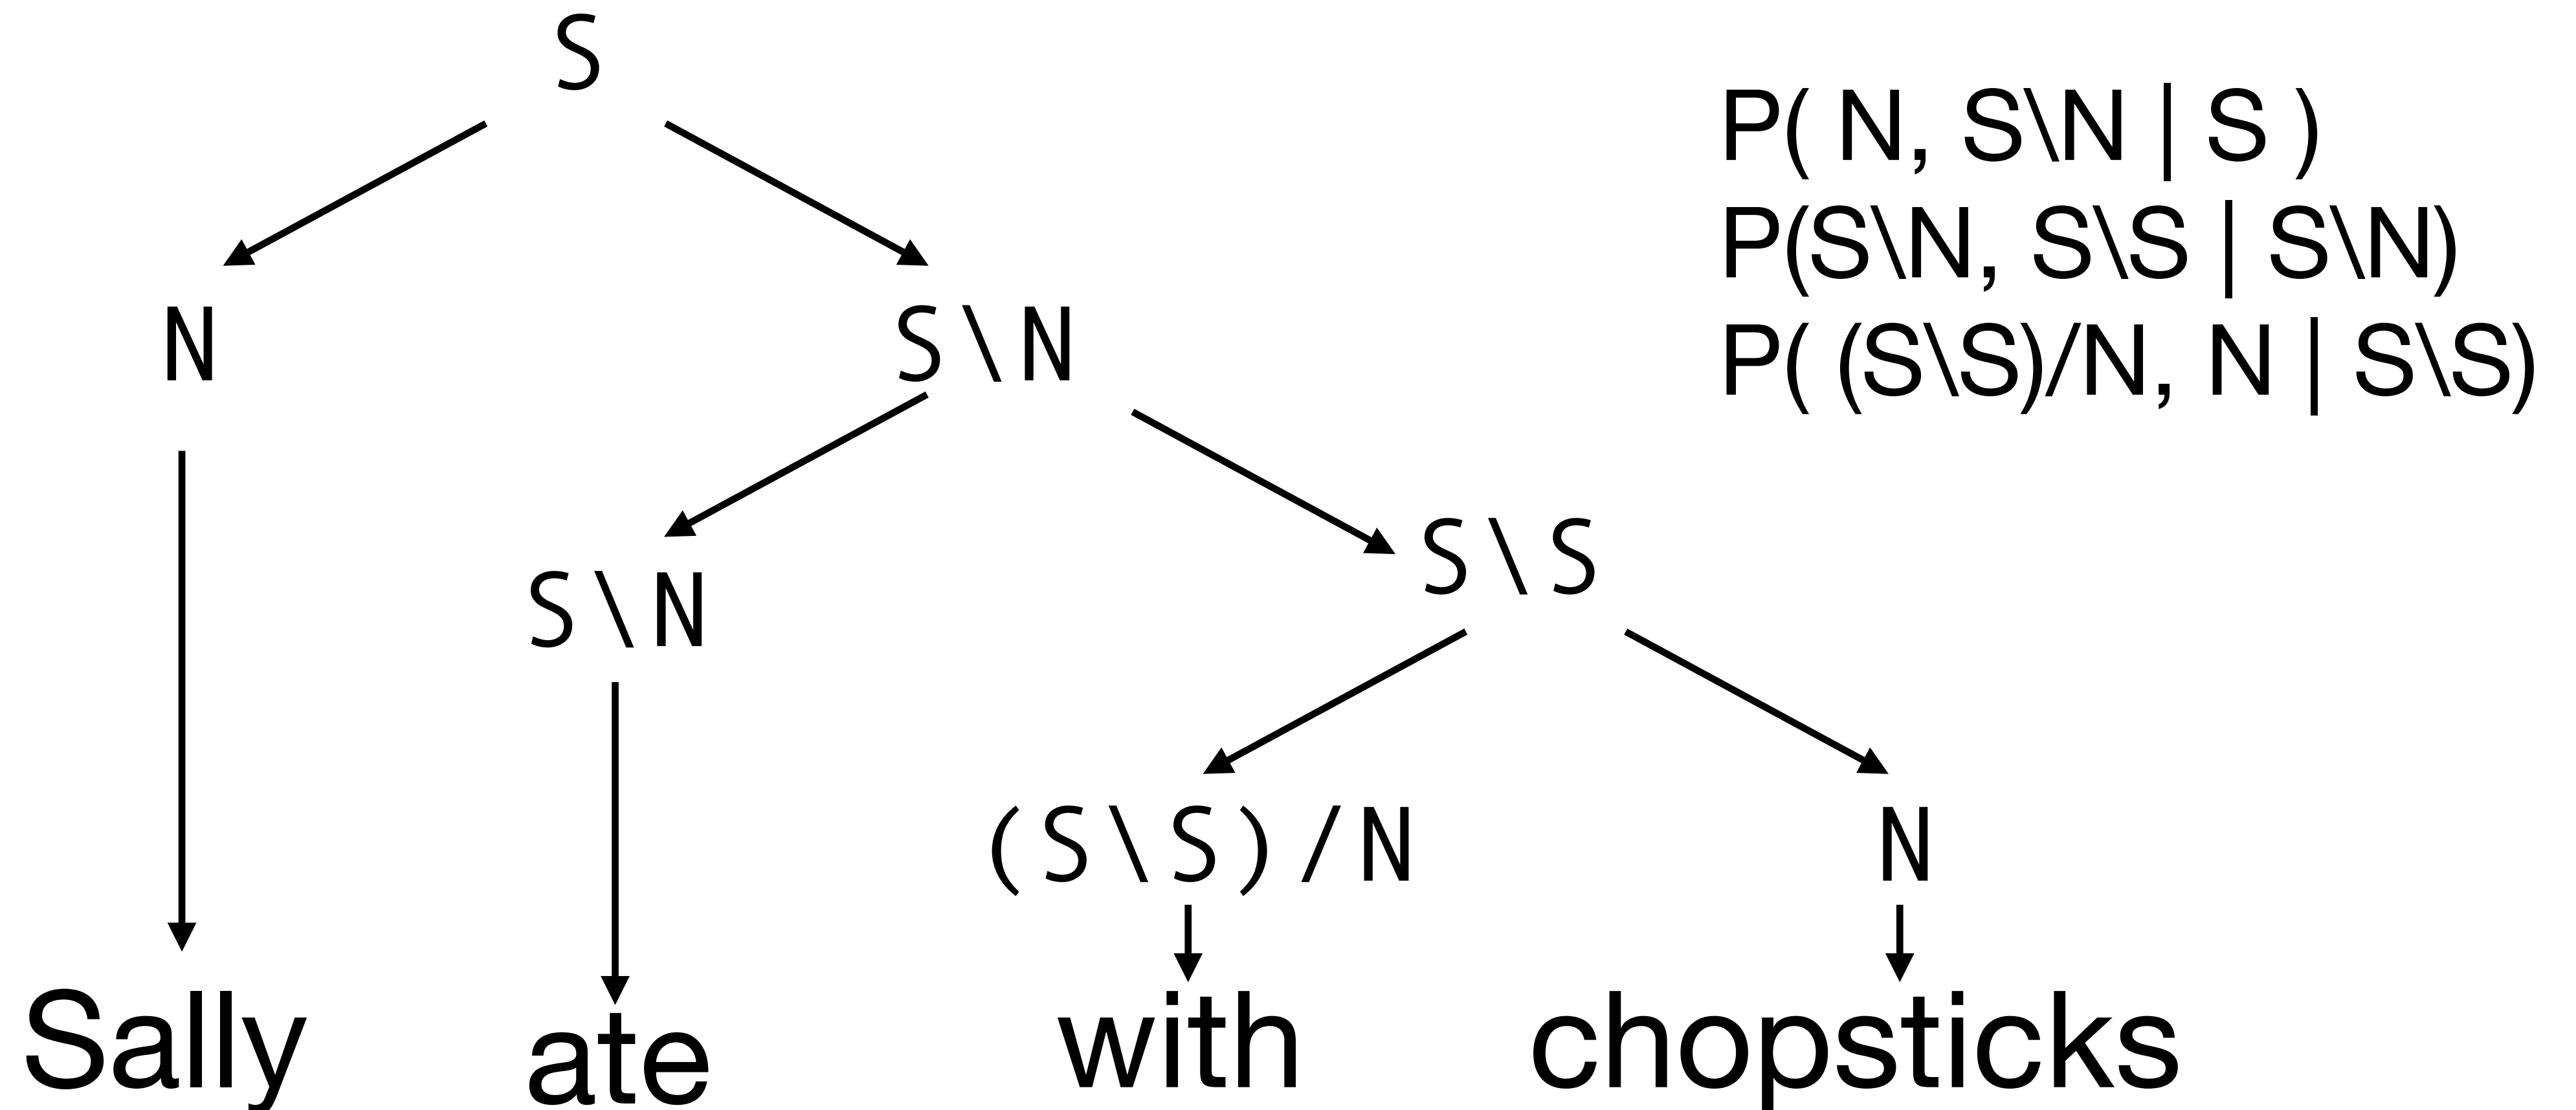

$\lambda y . \lambda x . \text{eat}(x, y)$

$\lambda f . f$

`ran(Sally, home)` `ate(Sally, dinner)`

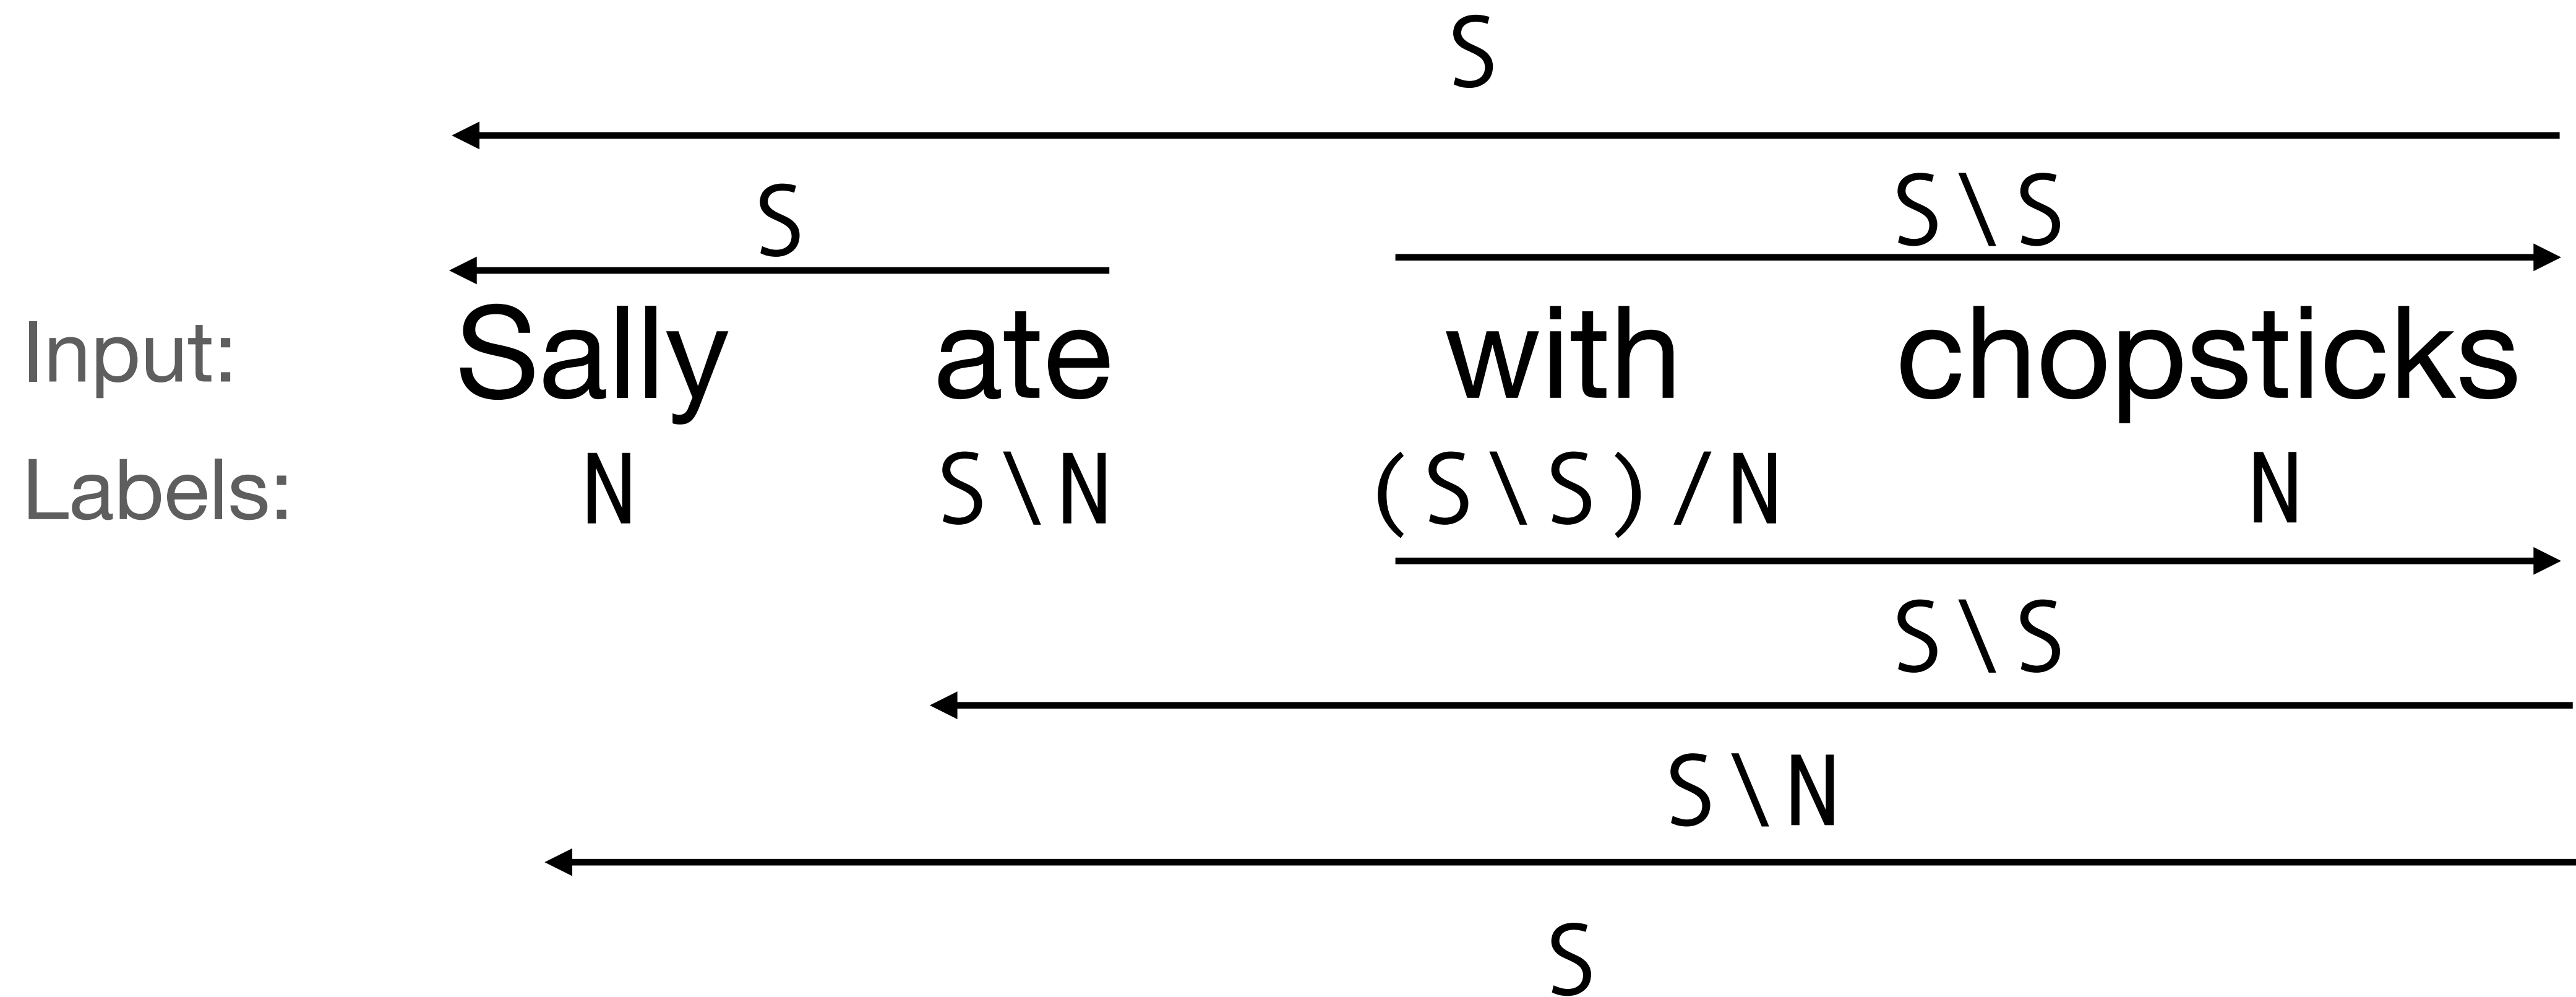

Modeling

How should we define a probabilistic model?

Modeling

Supertagging

Supertag LSTM Analysis

Supertag	LSTM						
	F-For	Forward	Backward	bi-LSTM	+LM(g-train)	ss-train-1	ss-train-5
(NP\NP)/NP	90.00	88.89	81.91	92.09	92.18	91.72	92.31
((S\NP)\(S\NP))/NP	75.75	69.53	61.60	80.38	78.21	79.91	78.77
S[dcl]\NP	77.29	61.14	58.52	84.28	83.41	82.97	80.35
(S[dcl]\NP)/NP	91.39	56.58	69.86	92.34	92.46	92.46	92.82
((S[dcl]\NP)/PP)/NP	42.30	30.77	42.31	56.41	64.10	62.82	60.26
(S[dcl]\NP)/(S[adj]\NP)	86.80	22.84	83.25	87.31	88.83	87.82	86.80
((S[dcl]\NP)/(S[to]\NP))/NP	86.49	56.76	75.68	94.59	91.89	91.89	91.89

Modeling the Arguments

Induced Lexicons: Adjectives
